```

do full simulation for each cap from 0 to 300.

*normalised exports
 Minimise difference of getExp - normalised Exp
 this gives best candidate cap
 this site all the output*

*iteration
 It is to get a better number for CCM seen by number
 It tries CCM as, gradually spaced
 numbers from 0 to 3. try them
 out, choose them for n.*

*Definitions
 Stores 40 years of simulated data in 5 categories
 Births data, export traders*

```
